

These are the 2001 editions of the classic tidal current tables mariners have depended on since they were first introduced by the Coast and Geodetic Survey in 1890. In recent years NOAA made these tables available to the public, but they are no longer printed by the government. International Marine is now publishing these seaworthy books. Included are the times and velocities of ebb and flood currents, information on rotary currents, Gulf Stream information, and data on thousands of locations in North America, South America, and Asia.
